Dear Harold,

We are pleased to give you our reference for your Variable flow and SpinFree nozzles. Munters Corp begin using the nozzles in March, 2010 for two new product lines. We tested and could not find any other nozzles that met our requirements for variable flow and even coverage with large droplet size. We were able to significantly reduce the plumbing and quantity of nozzles others required due to the square pattern with very little overlap required. Most other nozzles required at least 50% overlap because they left a hole or deficiency in the spray pattern directly underneath. We have purchased for both the US and European markets over 8,000 nozzles and have been very pleased with the quality and performance.

Regards,

Rick Pautz
