Re: Reference letter

Harold,

As one of your oldest customers, I am happy to give you a positive reference on your Spin Free nozzle.

Service Tech Cooling Towers, LLC is a full service cooling tower company that design builds new concrete cooling towers and provides maintenance/ OEM parts for existing cooling towers. As you know, we have installed your nozzles since 2004 and have retrofitted in more of your nozzles than any other rebuilder. During this time we have experienced no failures that were consequential and have had multiple repeat customers.

Uniform water distribution is the key to cooling tower performance and we believe that your nozzle is the best solution on the market for achieving great results.

The benefits of the rotary nozzles are significant (1 to 2 degrees cooler water) and those benefits have allowed us to create a section of our business that focuses on water distribution retrofits for BAC, Evapco, Marley, Tower Tech, concrete and field erected counter-flow cooling tower designs.

We appreciate the good relationship between our companies and plan to continue offering all the Global Opportunities products as part of our business for many years to come.

Best Regards,

Kelly Boyd – CEO
